

SOFTWARE DEVELOPMENT CAPSTONE PROJECT

CAPSTONE PROJECT PROPOSAL

STUDENT MANAGEMENT SYSTEM

PROPOSED TO:

Mohetuzzaman Mubin
Senior Lecturer
Department of Software
Engineering
Daffodil International
University

ORGANISED BY:

MD: Shakibul Hasan
ID: 221-35-950
Section : D
Department of Software
Engineering
Daffodil International University
Course Code: SE-133

Project Summary

I will build a Student management system.
Here the user can manage the student's data.
User can create update read and delete
students information. I will use filesystem to
store data in txt file.

Project Features

01

Student Creation -
User has to give input of student's information and data will be saved on user files

02

Update Data -
User has to give input of student new data and old value will be replaced.

03

View Student Data -
User has to give student id in input then student data will be displayed

04

Remove Student -
User has to give student id in input then student will be removed

Background & Motivation

It is difficult to manage student's data on paper and pen. It is also very difficult to extract the data of specific students from large amount of data. In this system, specific data can be easily extracted by giving student's ID also can be update and remove easily from the data.

Thank You
